## Resin stopper

### Description

Resin stoppers are put on the end of the extension hoses installed on the mixer filled with properly mixed resin. Application can begin after the mixer has been placed in the hole, when the piston reaches the bottom. Resin is gradually filling the whole and pushing the piston upwards (like a pump). This solution ensures full control over filling the hole with resin. You should use proper resin stopper depending on the diameter of the hole drilled. This piston can be reused.

Min. hole diameter [mm]	Code	Pcs.
Ø20	TCF-18	1
Ø25	TCF-22	1
Ø32/35	TCF-30	1
Ø40	TCF-36	1
