

THH Hydrotech tape

Description

The HYDROTECH - flexible, plastic butyl layer laminated with a polypropylene nonwoven fabric.

Technical data

- Colour: Grey
- Thickness 1.2 mm
- Application temperature from +5° C to + 40° C
- Thermal resistance from -30° C to +80° C

Application

- Sealing of window-wall connections
- Sealing of glass, metal, wood, wherever high vapor barrier requirements are required.

Features and advantages

- Excellent adhesion to most building materials
- It is self-curing with the substrate
- Resistant to water, moisture and atmospheric influences
- Allows immediate sealing
- Flexible vapor barrier with excellent adhesion to most building materials, including acrylic glass and polycarbonate.
- Butyl binders on the entire width of the tape provide ideal anti-fouling protection for gas and water vapor. Slightly flexible and flexible - takes over the movement of the building.

Code	Width [mm]	Length [mb]
